How to Use Hospital Management System

Computerization in this sector allows physicians to better diagnose and treat their patients. If properly implemented, it lets the Hospital access the records of its patients in much efficient manner.

1. DOCTORS

✚ Add Doctors

- ❖ This feature will allow the system to add doctors.
- ❖ The form will need information regarding name, age, sex, address, shift, etc. of a doctor.
- ❖ Upon submission of the form, information regarding the doctor will be stored in a table.

👁 View Doctors

- ❖ This feature will allow users to view doctors stored in the system.
- ❖ User can search for doctors based on name, age, sex, address, shift, etc.
- ❖ Users can sort the table based on availability of the doctor.

2. PATIENTS

➕ Add Patients

- ❖ This feature will allow the system to add patients.
- ❖ The form will need information regarding name, age, sex, address, shift, etc. of a patient.
- ❖ Upon submission of the form, information regarding the patient will be stored in a table.

👁 View Patients

- ❖ This feature will allow users to view patients stored in the system.
- ❖ User can search for patients based on name, age, sex, address, shift, etc.
- ❖ Users can sort the table based on severity of the patient.
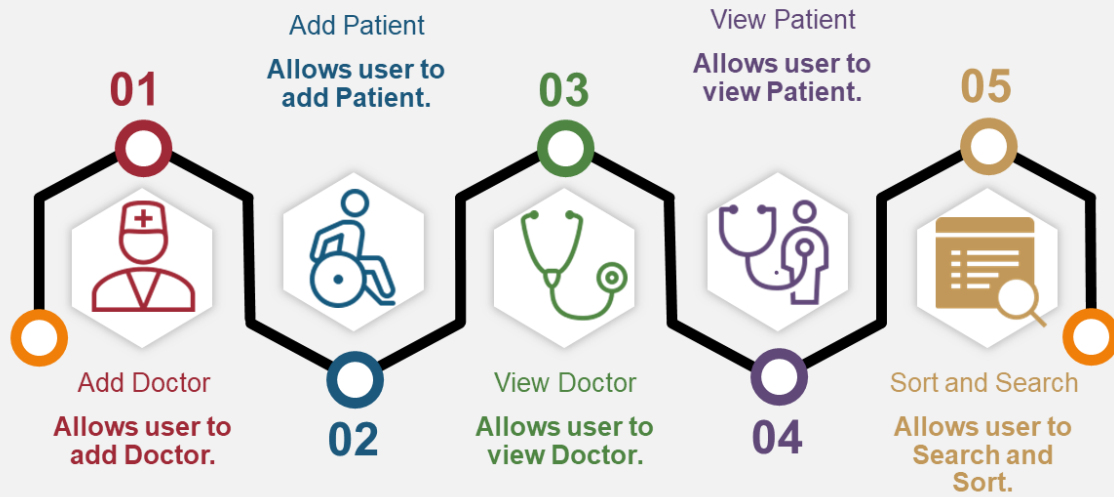

3. Additional Features

🔍 Searching

- ❖ Find your desired information within a matter of seconds thanks to the Binary Search Algorithm.

⬍ Sorting

- ❖ Go through your data and arrange them by your requirements.

Add Patient
Allows user to add Patient.
